

What is Sleep Apnea?

Obstructive Sleep Apnea (OSA) is a sleep-related breathing disorder that occurs when the soft tissue in the back of the throat collapses and blocks the upper airway. This reduces the amount of air getting into the lungs, leading to pauses in breathing. The brain responds by waking the body from sleep to restore normal breathing, causing fragmented sleep that often results in excessive daytime sleepiness. OSA is a serious disease that when left untreated may result in long-term medical consequences such as hypertension, stroke, cardiovascular disease, diabetes and depression.

Freedom to Dream.

Winx®. A new treatment for sleep apnea, without the mask.

Treatment Options

If you have been diagnosed with OSA, there are several treatment options available. These options include continuous positive airway pressure (CPAP), oral appliances, surgery and positional aids.

Now, a new treatment for OSA is available. Introducing the Winx® Sleep Therapy System.

The Winx Advantage

Winx is an innovative home-use device for the treatment of OSA in adults. The system is designed to offer a comfortable sleeping experience by enabling users to breathe naturally through their nose without being restricted by a mask, making it possible to sleep freely in any desired position.

The Winx Sleep Therapy System offers:

- OSA therapy without a mask
- Quiet console
- Slim tubing for sleeping in any position
- Soft, flexible mouthpiece
- Easy to use, clean and maintain
- Compact and travel friendly

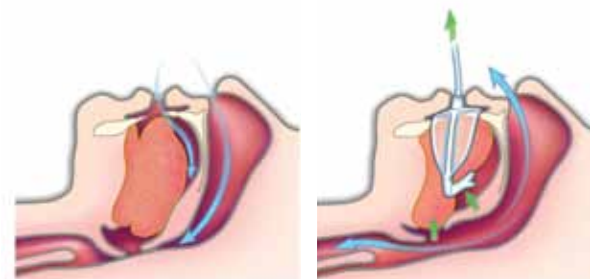

Works like a Dream.

Sleeping Naturally with Winx

Every component in the Winx system is designed to make users appear and feel natural while they sleep.

- Small, stylish console fits on most nightstands
- Quiet system enables peaceful sleeping environment
- Soft mouthpiece and slim tubing allow patients to sleep in any desired position

Restricted Airway

Increased Airway with Winx

A mouthpiece is worn inside the mouth during sleep. Using Oral Pressure Therapy (OPT), the console creates a light oral vacuum that gently pulls the soft palate forward and stabilizes the tongue, increasing the size of the airway and allowing for natural breathing to occur during sleep.

Is Winx Right for You?

If you have been diagnosed with mild, moderate or severe obstructive sleep apnea, you may be a candidate for the Winx Sleep Therapy System. You will need to be able to breathe through your nose without mouth breathing in order to successfully use Winx.

Ask your physician if Winx is a viable treatment option for your sleep apnea.
